

Comparing Greenhouses on Earth and Mars

ON MARS	ON EARTH
<p>Greenhouses provide:</p> <ol style="list-style-type: none">1. a warmer environment;2. UV protection;3. weather protection<ul style="list-style-type: none">o windo dust storms;4. increased atmospheric pressure;5. different atmospheric composition inside than outside; and6. always higher humidity and temperature than outside.	<p>Greenhouses provide:</p> <ol style="list-style-type: none">1. a warmer environment;2. UV protection;3. weather protection<ul style="list-style-type: none">o windo rain, hail, other forms of precipitation;4. same atmospheric pressure inside as outside;5. same atmospheric composition as outside; and6. usually higher humidity and temperature than outside
<p>Greenhouses do not increase the amount of solar energy available for photosynthesis.</p>
