

## Instructions:

1. Draw a simple bar graph showing the relative amount of residue collected in each of the five filters.
2. The filter number, *i.e.* 1 through 5 from coarse to fine, is across the bottom (the x-axis) of the graph.
3. The relative amount of residue is on the vertical axis (the y-axis).
4. Five represents the most residue and 1 represents the least residue.
5. If two or more quantities appear more or less equal, use a balance to determine the mass of each or estimate as best you can.
